Go to field permission in visible to: press add roles the select (User @ View-Only)</li><li>5. Save</li></ol>	Field is visible but not editable	Field is visible but not editable
TC2.2 Set edit permission	<ol style="list-style-type: none"><li>1. Go to forms and lists tab</li><li>2. Select form</li><li>3. Select title field</li><li>4. Go to field permission in editable by: press add roles the select (User @ Editor-Roll)</li><li>5. Save</li></ol>	Field can be edited	Field can be edited

## **Scenario 3:** Test field permissions

Test Case	Steps	Expected Result	Actual Result
T C3.1 Add default value to text	<ol style="list-style-type: none"><li>1. Go to forms and lists tab</li><li>2. Select form</li><li>3. Select title field</li><li>4. Go to Default Title and write "The ticket title is:"</li><li>5. Press save button</li></ol>	When form loads, title field shows "The ticket title is:"	When form loads, title field shows "The ticket title is:"
TC3.2 Date default = Today	<ol style="list-style-type: none"><li>1. Go to forms and lists tab</li><li>2. Select form</li></ol>	When form loads, Today's date is auto filled	When form loads, Today's date is auto filled

	3. Select Need to be done before (Deadline) field 4. Go to Default date and select today's date 5. Press save button		
--	--	--	--

#### **Scenario 4:** Mandatory field validation

Test Case	Steps	Expected Result	Actual Result
TC4.1 Mandatory dropdown	1. Go to forms and lists tab 2. Select form 3. Press on Type of work field and then select mandatory box 4. Press Save button 5. Go to tickets tab and the press create ticket button 6. On form field select the form we just add or edit 7. Press save button	Error message appears: You have not filled in all the required fields	Error message appears: You have not filled in all the required fields

#### **The automation script for scenario 4**

### **What the script does:**

1. Login
2. Go to Tickets tab
3. Press the Create ticket button
4. Try submitting without entering data
5. Verify error messages appear

### **GitHub Test Script link for scenario number 4:**

[Automation Test Script](#)

## **4. Documentation**

### **Steps Taken:**

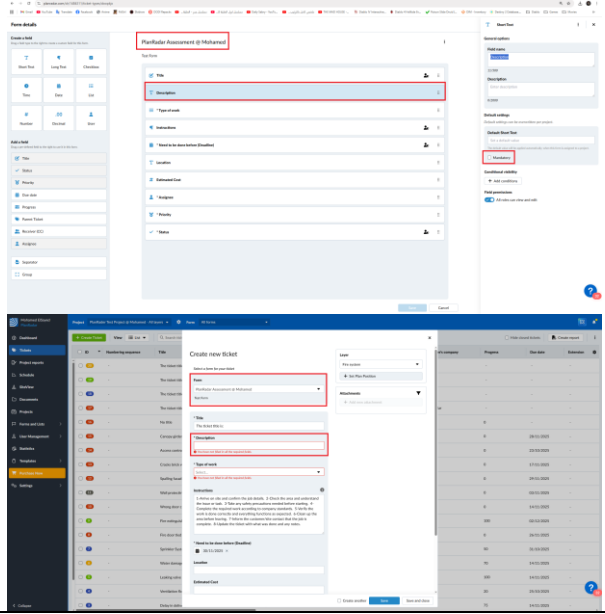

- Created a new demo account.
- Navigated to Forms.
- Reviewed knowledge base articles.
- Create a new form inside the default project.
- Added text, dropdown, and date fields.
- Configured permissions for two roles.
- Tested default values (text + date).
- Tested mandatory validation.

### **Observations:**

- Field types work correctly.
- Dropdown options were rendered properly.
- Permissions were applied (View Only role could not edit fields).
- Default values populated automatically.

- Mandatory validation prevented submission.

## 5. Bugs Found

ID number	#1
Name	Description field shows validation error message
Reporter	Mohamed ElSayed
Submit Date	11/15/2025
Summary	When trying to create a new ticket and press save button error message appears under Description field, while it is NOT a mandatory field.
URL	<a href="https://www.planradar.com/dr/1484311/1484312/defects/21a7f12c-24af-4b3b-8682-d14a80b63678/details">https://www.planradar.com/dr/1484311/1484312/defects/21a7f12c-24af-4b3b-8682-d14a80b63678/details</a>

Priority	High

## Description

When trying to create a new ticket and press save button error message appears under Description field, while it is NOT a mandatory field

## Steps to reproduce

- > Go to tickets tab
- > Press creates new ticket button
- > On form field select "PlanRadar Assessment @ Mohamed "form
- > Press save button
- > Error message "You have not filled in all the required fields. "Appears under description field (see screenshot)

## Expected result

NO error message appearing under description field after pressing the save button

## Actual result

Error message "You have not filled in all the required fields. "Appears under description field

ID number	#2
Name	Administrator account role bug
Reporter	Mohamed ElSayed
Submit Date	11/15/2025
Summary	Any user with any permissions can change the administrator role in the projects.
URL	<a href="https://www.planradar.com/dr/1484311/projects/1484312/users">https://www.planradar.com/dr/1484311/projects/1484312/users</a>
Screenshot	
Platform	Windows 10 x64-bit
Operating System	Edition Windows 10 Pro Version 22H2 OS Build 19045.6466
Browser	Chrome Version 142.0.7444.136 (Official Build) (64-bit)
Severity	Critical

Assigned to	/
Priority	High

### **Description**

Any user with any permissions can change the administrator role in the projects

### **Steps to reproduce**

- > Login with any (In-house) user account
- > Go to projects page then select our project
- > Go to user's tab and press the roll column for the administrator user account
- > Change the roll from administrator to any another roll (see screenshot)
- > The system saves and applies the changes (see screenshot)

### **Expected result**

Any user accounts other than the administrator user can NOT change the roll for the administrator account

### **Actual result**

Any user accounts other than the administrator user CAN change the roll for the administrator account

## **6. Recommendations for Improvements**

1. Add real-time validation: Show mandatory field errors instantly, not after submitting.
2. Add bulk field creation templates (multiple selection at the same time): Speeds up form creation.
3. Add "Test Form" mode: Allow QA or admins to simulate different roles without logging out.

4. Improve the form UI&UX design: make it more user friendly and easy to use.
5. Add more automated info about the form, like: form creator name and form creation day.
